HELLO

Thank you for taking a look at our catalog! We would like to take this opportunity to introduce ourselves to you.

We are a German family business based in the most western region of Germany - where all of our products are manufactured to the highest quality standards. From the development of a component and the design of the injection molding tools to the production and packaging of the individual sets, everything takes place right here in the region of Heinsberg.

In addition to the high quality standards, our different products have another thing in common, which is their compatibility with a well-known building block manufacturer from Denmark. This allows us to build on an existing and established system that is familiar to many children and offer additional learning and play opportunities with our products.

Have fun browsing and discovering!

Big Building Box
#420572 12

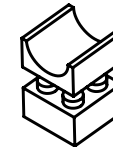

Marble Run

Our modular and compatible marble runs are designed to stay put, so your kids can focus on the fun. They promote spatial intelligence and an understanding of fundamental physical concepts like acceleration and gravity. Whether with an instruction booklet or with free play, constructing a marble run stimulates working memory, and improves the capacity for analytical thought. And best of all, we're building on an existing system to extend its life in the children's room.

How do number pyramids work?

The blocks in the bottom row are called **foundation blocks**.

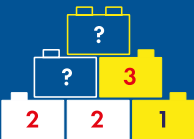

The sum rule applies everywhere.

With Prof. Kortenkamp’s learning blocks, elementary school students can build real number pyramids, which they previously only knew on paper in their textbooks. There is a simple principle: The numbers of two blocks next to each other add up to the result on the block above.
